

## DESIGNED TO BE THE PERFECT MASK FOR PATIENTS WHO HATE MASKS.

Some people simply can't be compliant with therapy that involves a traditional nasal mask because they simply can't get a comfortable fit. We made that insight the inspiration behind new ComfortLite™ 2. We give patients the choice of three different cushion types for a more personal, more comfortable fit. And we use the patient's forehead for stability so it barely touches the face. That, along with improved headgear and stronger, more comfortable components, makes the ComfortLite 2 the ideal choice for many patients. It's one more way that Respironics turns ideas and insights into practical solutions that help you fit 100% of your patients 100% of the time.

ComfortLite™ 2

# ComfortLite™ 2

## More cushion options and no pressure points – designed to help increase patient comfort and compliance.

The unique design of the new ComfortLite 2 makes it uniquely qualified to satisfy the comfort and compliance needs of patients. Unlike other masks that use the nostrils for seal and stability, the ComfortLite 2 uses its new “Halo” headgear and forehead mechanism for stability. This allows the cushion to provide a comfortable, reliable seal with no pressure points – and that’s why we put special focus on the cushion.

The ComfortLite 2 reaches an all new level of personalized comfort with three cushion styles available: Pillows Cushion, Simple Cushion™ and Direct Seal™ Cushion. Our mask combo packs are available in a variety of styles and sizes.

For improved comfort and durability, we’ve replaced the plastic side straps with a flexible, sleep-friendly fabric. The crown swivel is also made of a new, easy-rotating material, and it’s been moved forward to reduce contact with the patient’s bed pillow. Improvements like this help make the ComfortLite 2 our best lightweight mask ever.

\*\* Also available in 5/packs.

Updated 360° crown swivel is made of a new material to swivel more easily and move with the patient.

Tubing attachment point moved forward toward forehead, minimizing contact with pillow – and maximizing stability.

Multiple position angle adjuster and rotating vertical adjuster provide optimal cushion placement for personalized seal and superior comfort.

Headgear straps are now made with a softer, sleep-friendly fabric to eliminate pressure points and improve comfort for all sleepers.

Flexible adjustment band on Pillows Cushion and Direct Seal™ optimizes cushion angle for the best seal.

A more traditional cushion option, the Simple Cushion™ has a freely rotating ball-and-socket elbow/cushion assembly, which enables proper cushion tilt for a personalized seal.

## Three Nasal Interface Options

NEW Pillows Cushion inserts into the nostrils for a quick seal and easy patient set-up.

Simple Cushion™ is a tip-of-the-nose nasal cushion that is smaller to reduce bulk and pressure points.

Direct Seal™ Cushion offers a comfortable seal without insertion into the nostrils.
